

HOW TO MAKE FLIGHT SAFE FOR BIRDS

Each year in Canada, millions of birds are injured or die due to collisions with office and residential buildings.

- ❖ When working late, use task lighting instead of overhead lights
- ❖ Close window curtains and blinds
- ❖ Turn off all exterior floodlights during spring and fall bird migration seasons
- ❖ If surrounding greenery is reflected in your windows (especially the second floor), consider a bird-deterrent window solution
- ❖ Report a fallen bird at your home or workplace by calling FLAP Canada at: 416.366.3527 or email flap@flap.org
